FitCheck — Conceptual Entity-Relationship (ER) Diagram (Chen Notation)

Academic DBMS Specification | Strong Entities, Weak Entities with Partial Keys, Identifying Relationships, and Participation Constraints

Academic Conceptual ER Notation Reference (Chen Methodology):

Strong Entity	Independent entity with autonomous primary key (e.g. USER, BRAND, GARMENT)
Weak Entity	Existence-dependent entity identified by owner key + partial key (e.g. GARMENT_SIZE, GARMENT_MEASUREMENT)
Relation	Standard relationship diamond connecting entities
Ident_Rel	Double diamond identifying relationship binding weak entity to strong owner
primary_key	Primary key attribute indicated by solid underline
partial_key	Discriminator attribute of weak entity indicated by dashed underline
derived_attr	Computed/derived attribute indicated by dashed oval
═══	Double line indicating Total Participation (mandatory existence dependency)
───	Single line indicating Partial Participation (optional association)
